## **CLAIMS**

- 1. Ophthalmic lens consisting of a substrate made of organic glass, of an abrasion-resistant coating, of a layer of impact-resistant primer and of an inorganic anti-reflective coating, characterized in that the surface of the said substrate is covered with the abrasion-resistant coating and in that the impact-resistant primer layer is inserted between the said abrasion-resistant layer and the anti-reflective coating.
- 2. Lens according to claim 1, wherein the substrate is chosen from:
  - (I) the glasses obtained by polymerization of diethylene glycol bis(allyl carbonate);
  - (II) the glasses obtained by polymerization of acrylic monomers derived from bisphenol A;
- (III) the glasses obtained by polymerization of allyl monomers derived from bisphenol A.
- 3. Lens according to claim 1, wherein the substrate is chosen from:
  - (A) the glasses obtained from poly(methyl methacrylate);
  - (B) the glasses obtained from polystyrene resin;
  - (C) the glasses made of resin based on diallyl phthalate.
- 4. Lens according to claim 1, wherein the impact-resistant interlayer has an intrinsic Bayer value lower than or equal to 2, at a thickness of 3  $\mu m$ .
- 5. Lens according to claim 1, wherein the impact-resistant primer is a thermoplastic or heat-curable polymer composition which has a solids content ranging from 5 to 20% by weight relative to the total weight of the primer composition.
- 6. Lens according to claim 1, wherein the thickness of the impact-resistant interlayer in the cured state is between 0.2 and 1  $\mu$ m.
- 7. Lens according to claim 1, wherein the composition of the impact-resistant primer consists of a thermoplastic polyurethane resin obtained by reaction of a diisocyanate with a compound comprising a reactive hydrogen at each end.

- 8. Lens according to claim 1, wherein the composition of the impact-resistant primer consists of a heat-curable polyurethane resin obtained by reaction of a blocked polyisocyanate and of a polyol.
- 9. Lens according to claim 1, wherein the composition of the impact-resistant primer consists of a copolymer of acrylic and/or methacrylic monomers and of aromatic vinyl compounds.
- 10. Lens according to claim 1, wherein the composition of the impact-resistant primer consists of a polysiloxane.
- 11. Lens according to claim 10, wherein the composition of the impact-resistant primer contains, in a solvent medium, one or a number of silane hydrolysate(s) with an epoxy group containing at least one Sialkyl group and containing no fillers.
- 12. Lens according to claim 1, wherein the hard abrasion-resistant coating is obtained by curing a composition containing:
- a) colloidal silica which has a mean particle diameter of between 1 and 100 mum;
  - b) a solvent;
- c) a hydrolysate or a mixture of hydrolysates of silane compound(s) of formula:

 $R^{3}a$   $R^{1} - Si - (OR^{2})_{3-a}$ (\alpha)

25 in which:

30

R<sup>1</sup> denotes an organic group containing an epoxy group;

 $R^2$  is a hydrocarbon radical which has  $1 (\hat{or} \hat{z})$  carbon atoms;

R<sup>3</sup> is a hydrocarbon group which has from 1 to 4 carbon atoms, and a is 0 or 1 in value.

- 13. Lens according to claim 1, wherein the thickness of the abrasion-resistant layer, in the cured state, is between 1 and 15  $\mu m$
- 14. Lens according to claim 12, wherein the composition of the abrasive-resistant costing has a colloidal silica content of between 0 and 40% by weight in the solids content.

- 15. Lens according to claim 1, wherein the anti-reflective coating consists of a mono- or multilayer film based on dielectric materials and deposited by vacuum deposition.
  - 16. Lens according to claim 1, successively including:
- a) a substrate made of glass obtained by polymerization of diethylene glycol bis(allyl carbonate);
- b) a hard abrasion-resistant coating obtained by curing a composition containing, in methanol, colloidal silica and a hydrolysate of  $\gamma$ -glycidyloxypropylmethyldiethoxysilane;
- c) an impact-resistant interlayer obtained by curing a composition containing, in methanol, a hydrolysate of  $\gamma$ -glycidyloxypropylmethyldiethoxysilane or of  $\gamma$ -glycidoxypropyltrimethoxysilane;
  - d) a multilayer anti-reflective coating.
  - 17. Lens according to claim 1, successively including:
- a) a substrate made of glass obtained by polymerization of diethylene glycol bis (allyl carbonate);
- b) an abrasion-resistant coating obtained by curing a composition containing, in methanol, colloidal silica and a hydrolysate of  $\gamma$ -glycidoxypropylmethyldiethoxysilane;
- c) an impact-resistant interlayer obtained by 35 curing a composition containing 4,4'-dicyclohexylmethane diisocyanate and polyethylene glycol;
  - d) a multilayer anti-reflective coating.
- 18. Process for the manufacture of an ophthalmic lens as defined in claim 1, comprising:
  - applying the abrasion-resistant coating onto the surface of the organic glass substrate,
  - depositing the layer of impact-resistant primer is deposited onto the abrasion-resistant layer; and
  - depositing the anti-reflective coating is onto the impactresistant primer.
- 19. Process according to claim 18, wherein the abrasion-resistant layer and the layer of impact-resistant primer are deposited by

- 20. Process according to claim 18, wherein the abrasion-resistant and impact-resistant primer layers are pretreated using a surface activation treatment by a chemical or physical route.
- 21. Process according to claim 20, wherein the surface activation treatment is an alkaline chemical etching, an oxygen plasma treatment or an ion bombardment in a vacuum vessel.
